## W the WALRUS

© 1957 BY WESTERN PUBLISHING COMPANY, INC.

The Walrus, the only marine animal with two white tusks, is found along the arctic shores of N. America. It weighs 3000 lbs.

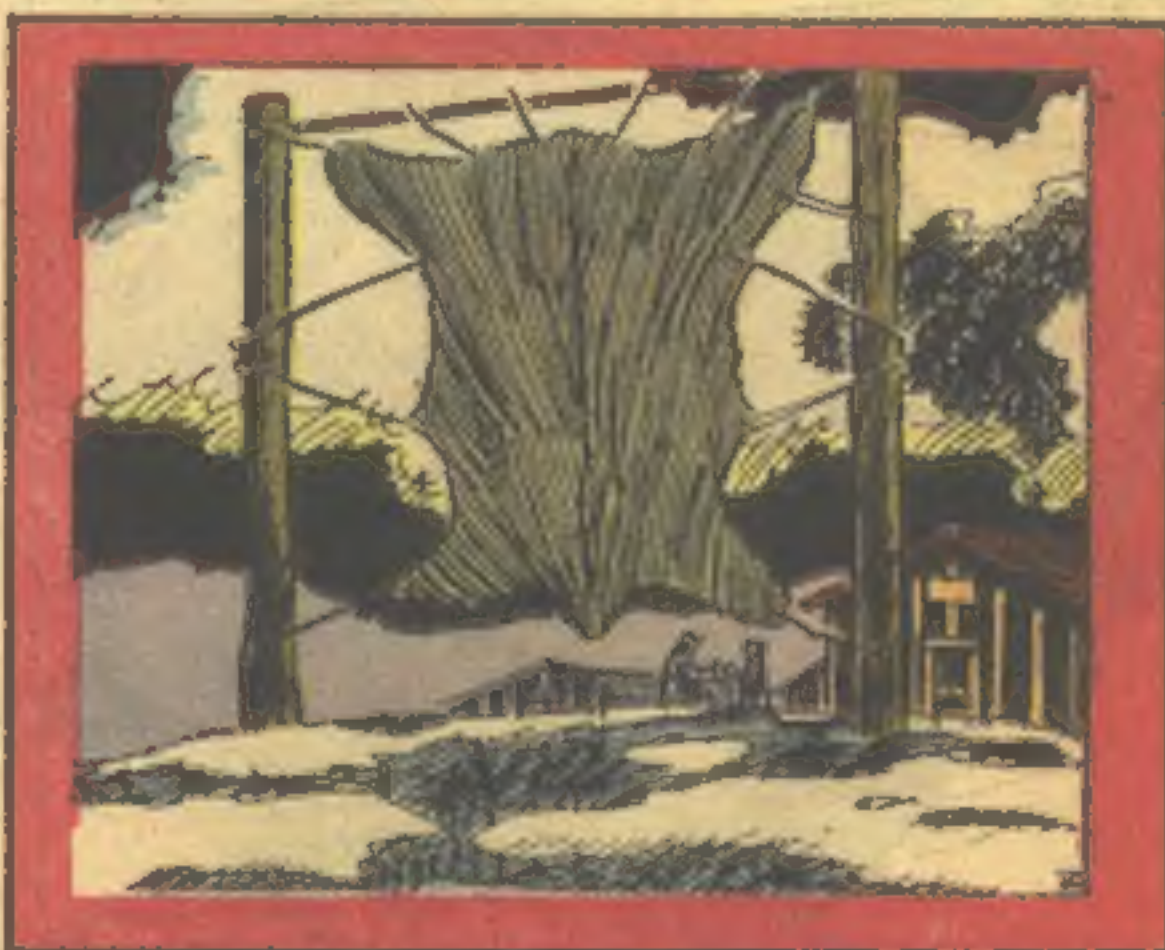

Walruses feed on mollusks gathered from the bottom with their tusks. They eat by standing on their heads in deep water.

When ready to sleep, a walrus can inflate its neck and float on the water. These animals group in noisy herds of a hundred.

Natives eat the flesh of walrus, and use its intestines for glass, oil for light, and the tusks fashioned into ornaments for barter.

The hide of walrus makes excellent buffing leather. As for oil, one animal yields up to a ton. Hunting is now regulated by law.
